

Coriell Summer Internship Program 2009

Molding Tomorrow's Scientists Through Hands-On Experience

Coriell hosted three high school and college students for this year's summer internship program, marking the 49th year the Institute has sponsored summer interns. The students were mentored by Kelly Hodges, Ruth Goldstein and Dr. Roderick Corriveau during their time at the Institute and were given scientific projects for which they were responsible during their stay. The internship program

Coriell's summer interns join Mr. Carlos del Sol and Mr. Jerry Buckley of Campbell Soup, the generous sponsor of the 2009 internship program.

allowed the students not only the opportunity to work alongside Coriell's scientific faculty, but also the chance to gain hands-on experience in a field they may want to pursue after graduation.

Intern Waliya Muhammad presents the findings she compiled during her time at Coriell.

The interns were selected from a pool of exceptional students with backgrounds in the sciences and worked full-time at the Institute for eight to ten weeks.

The culmination of this year's program was marked by a Summer Colloquium held on August 19, 2009. The colloquium gave the students the opportunity to present their research and work to their families, fellow interns and Coriell staff.

Coriell's 2009 Summer Internship Program was made possible by the generous support of the Campbell Soup Foundation.
