AICS-0109: MYH7-E525K mEGFP-ACTN2 (mono-allelic tag)

Cell Collection description	E525K mutation introduced into the MYH7 gene. Additionally, mEGFP added into C terminus of ACTN2.
Parental cell line	Human iPSC clonal line in which ACTN2 has been endogenously tagged with mEGFP using CRISPR/Cas9. Parental hiPSC line (WTC/AICS-0 passage 33 at acquisition) derived from dermal fibroblasts reprogrammed using episomal vectors (OCT3/4, shp53, SOX2, KLF4, LMYC, and LIN28).

^a This is the number of passages beyond the original parental line (WTC/AICS-0 at passage 33).

^b Viral panel testing was conducted for the parental WTC line prior to editing. Sterility (bacterial, fungal) and mycoplasma testing were conducted in both the parental and edited lines

^c STR tests were conducted for the WTC parental line prior to editing. WTC is the only cell line used by AICS. Edited WTC cells were not re-tested because they did not come into contact with any other cell lines.

Post-thaw imaging: One vial of distribution lot was thawed (cells were treated with ROCK inhibitor for 24hrs post-thaw - refer to culture protocol). Cultures were observed daily. Colonies were imaged one and four days post-thaw^{1,2} using a Leica microscope at 4x and 10x magnification. 1. clone 93 (E525K/wt) is shown here.
